

# Engineering that moves harvest FLOWERS CABLEWAYS

We design, manufacture and install comprehensive solutions for the transport of the harvest (avocado, citrus, banana, oil palm, flowers), with an after-sales service and permanent support, ensuring the initial return on investment.

## WHY US?

## Guarantees the quality of the product and reduces its loss

The Cableways and their parts are designed by our engineering process with the aim of making the displacement from the cutting site to the packing plant as "smooth and agile" as possible, avoiding damage due to derailments, wobble and strong jumps of the bunch during the trip.

## Flexible with respect to the terrain

The Centro Aceros Cableway systems allows you to avoid accidents such as canyons, rivers, canals, among others; without having to carry out expensive infrastructure works.

## Custom designs

Centro Aceros has a complete and reliable information gathering process (topographic data, plans, farm tour, among others); that ensures a system tailored to your needs and according to the specific needs of each client.

## Long system life

With our knowledge of materials and the engineering process, we guarantee a good design of the elements that make up the system, ensuring its durability and efficiency for more than 20 years, as well as low maintenance costs.

## Complete after-sales service

We offer spare parts and preventive maintenance kits with specialized labor that avoid unscheduled stoppages within the plantation.
